Software Architecture Document

1. Introduction

1.1 Purpose

This document provides a comprehensive architectural overview of the Bingo Application, using a number of different architectural views to depict different aspects of the system. It is intended to capture and convey the significant architectural decisions which have been made on the system.

1.2 Scope

The architecture of the Bingo Application is described by the scope of this Software Architecture Document.

1.3 Definitions, Acronyms, and Abbreviations

RUP: Rational Unified Process

UML: Unified Modeling Language

SAF: Software Architecture Document

1.4 References

Rational Unified Process: http://en.wikipedia.org/wiki/Rational_Unified_Process

Unified Modeling Language: http://en.wikipedia.org/wiki/Unified_Modeling_Language

4+1 architecture: http://en.wikipedia.org/wiki/4%2B1_architectural_view_model

1.5 Overview

Section 1: Architectural Representation

Section 2: Architectural Goals and Constraints

Section 3: Use Case View

Section 4: Logical View

Section 5: Process View

Section 6: Deployment View

Section 7: Implementation View

| | |
|--------------------------------|-----------------|
| Bingo | Version: 1.0 |
| Software Architecture Document | Date: 25/Jul/14 |
| SAD submission | |

2. Architectural Representation

- **Logical view**

Actor: Designers.

Area: Functional Requirements: describes the design's object model. Also describes the most important use-case realizations.

Related tools: Design model

- **Process view**

Actor: Developers

Area: Non-functional requirements: describes the design's concurrency and synchronization aspects.

- **Implementation view**

Actor: Programmers.

Area: Software components: describes the layers and subsystems of the application.

Related tools: Implementation model, components

- **Deployment view**

Actor: Deployment managers.

Area: Topology: describes the mapping of the software onto the hardware and shows the system's distributed aspects.

- **Use Case view**

Actor: all the stakeholders of the system, including the end-users.

Area: describes the set of scenarios, use cases that represent some significant, central functionality of the system.

Related tools: Use-Case Model

3. Architectural Goals and Constraints

Security

The System should have proper security

The Application should have basic security behaviors:

Authentication: User should logging using user name and the password

Confidential: Sensitive data should be encrypted (Current location of the user should not be revealed by other users)

- Non repudiation: should give evidence that an action occurred
- Persistence

Data should be persistence in Database

| | |
|--------------------------------|-----------------|
| Bingo | Version: 1.0 |
| Software Architecture Document | Date: 25/Jul/14 |
| SAD submission | |

Usability

- Required training time

Training time for a normal user about 2 hrs and training time for a power user about 20 minutes

- Help Information

Application should give help information to the user so the it can be handle easily

- Error Messages

Application should give error messages and how to recover from error when error occurs

Reliability / Availability

Server which website is hosted should be available at least 98% since users need to register via the site.

Mean Time between failures

Mean time between failures should more than 5 months

Mean time to repair

Mean time to repair should be less than 1 day

Accuracy

User should get accurate information about nearby locations and accurate deals from those sites.

Accuracy should be more than 95%

Resource utilization

Application should be consume less battery power. Resource utilization should be maximum

Design Constraints

- Android

Platform of the application is Android

- Java

Application uses Java as the default programming language

- Google Map API

Location identification is done using Google Map API

- Eclipse

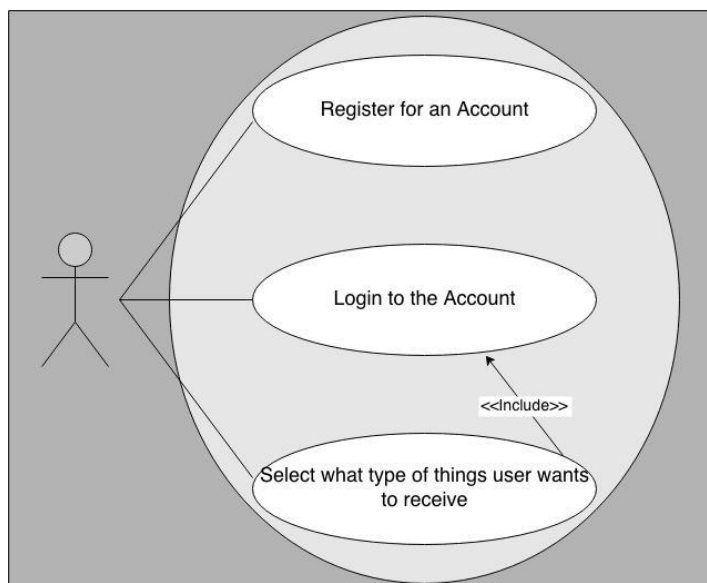

Eclipse is used as IDE

| Bingo | Version: 1.0 |
| Software Architecture Document | Date: 25/Jul/14 |
| SAD submission | |

4. Use-Case View

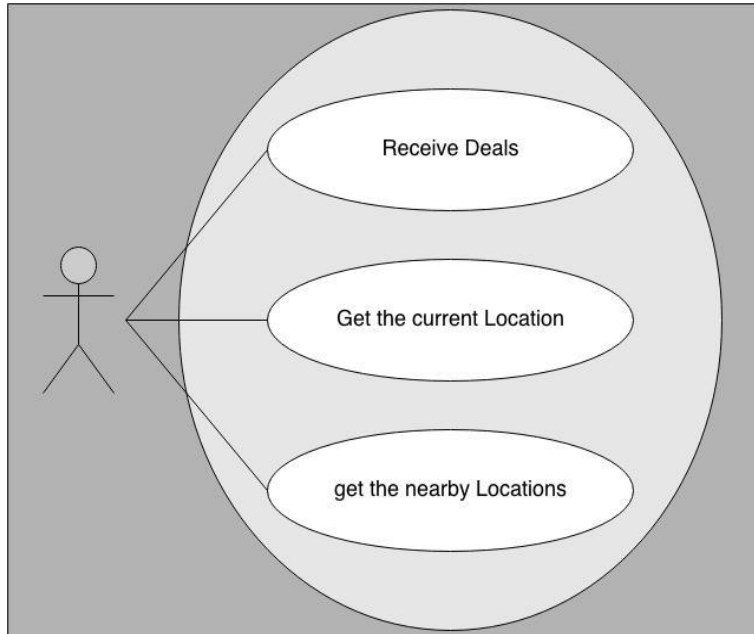

- Register for an account from the website
User can sign up for an account from the website. User need to enter username, password and mobile phone number
- Login to the account
User can login to their account using username and password
- Select whatever user wants to receive from the site
There are several types of deals or coupons available such as Hotels, Super markets and Cafes. So the user can select what kind of deals he/she wants from the website.
- Receive deals
User can receive deals from nearby locations by clicking send deals button in the Bingo application.
- Get the nearby locations
User can get the information about nearby locations such as distance, reviews, address, and mobile number from the Bingo application.

Website

| SAD submission | |

Application

4.1 Use-Case Realizations

| Use Case | Register for and account | |
|-----------------------------|--|-------------------------|
| Description | When user visits to the website, website asks to sign up if user hasn't an account. | |
| Actors | User | |
| Preconditions | The user must visit to the site. | |
| Post conditions | To be sign up successful user must enter the user name, password, password again and the mobile number | |
| Flow of events | Actor | System |
| | 1. User visits to the website | 1.1 show sign up button |
| | 2. User register for an account | 2.1 show sign up window |
| Exception conditions | If the sign up information wrong, website should give a message saying what was the wrong | |

| | |
|--------------------------------|-----------------|
| Bingo | Version: 1.0 |
| Software Architecture Document | Date: 25/Jul/14 |
| SAD submission | |

| | | |
|-----------------------------|--|-----------------------|
| Use Case | Login to Website | |
| Description | When a user login to the website, website asks to enter student user name and the password. | |
| Actors | User | |
| Preconditions | The user must be registered in website. | |
| Post conditions | To be login successful user must enter the user name and password correctly. | |
| Flow of events | Actor | System |
| | 1 User visits to the website | 1.1 show login window |
| | 2 User login to the website | 2.1 authenticate user |
| Exception conditions | If the user name or the password wrong, website should give a message saying login is incorrect. | |

| | | |
|-----------------------------|---|---------------------------|
| Use Case | Select what type of deals user wants to receive | |
| Description | After user login to the website, website asks what type of deals user wants to get. (Hotel deals, restaurant deals, super market deals) | |
| Actors | User | |
| Preconditions | The user must login to the site. | |
| Post conditions | By default all the options are available | |
| Flow of events | Actor | System |
| | 1 User login to the website | 1.1 show selection window |
| | 2 Select what kind of deals wants | 2.1 show selection window |
| Exception conditions | User should select at least one type, otherwise website should give a error message | |

| | | |
|-----------------------------|---|--------------------------------------|
| Use Case | Receive Deals | |
| Description | Application should received deals from the nearby locations when user clicks receive deals button | |
| Actors | User | |
| Preconditions | The user must run Bingo Android application | |
| Post conditions | | |
| Flow of events | Actor | System |
| | 1 Run the Bingo application | 1.1 show 'send deals' button |
| | 2 click 'send deals' button | 2.1 send deals from nearby locations |
| Exception conditions | | |

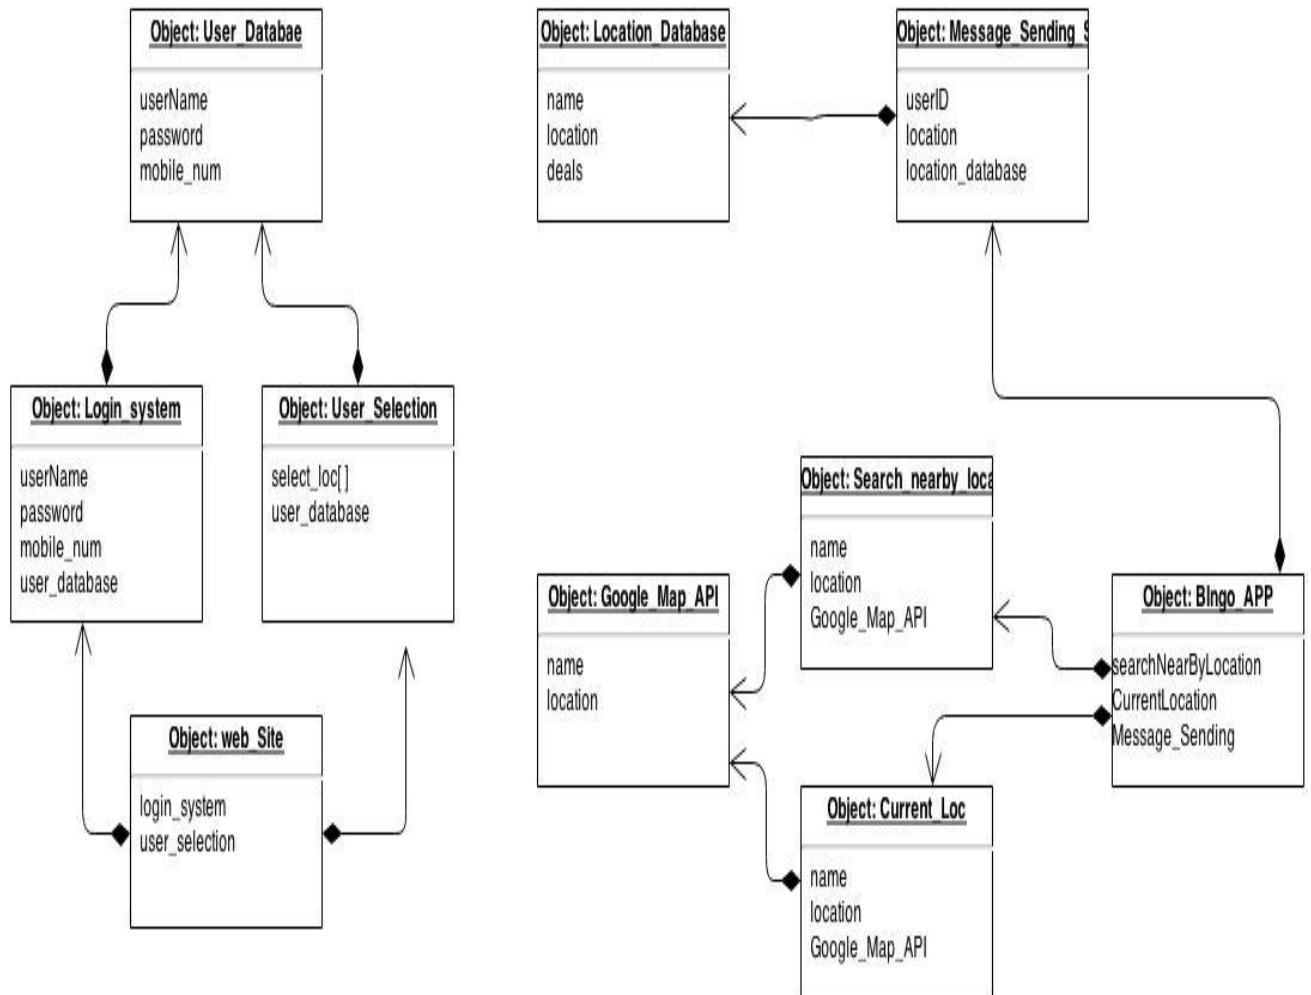

| | |
|--------------------------------|-----------------|
| Bingo | Version: 1.0 |
| Software Architecture Document | Date: 25/Jul/14 |
| SAD submission | |

| | | |
|-----------------------------|---|------------------------------------|
| Use Case | Show the current location | |
| Description | Application should the current location using GPS or IP | |
| Actors | User | |
| Preconditions | The user must run Bingo Android application | |
| Post conditions | | |
| Flow of events | Actor | System |
| | 1 Run the Bingo application | 1.1 show 'current location' button |
| | 2 click 'current location button | 2.1 show the current location |
| Exception conditions | | |

| | | |
|-----------------------------|--|---------------------------|
| Use Case | Get nearby locations | |
| Description | Application should show nearby locations of the user | |
| Actors | User | |
| Preconditions | The user must run Bingo Android application | |
| Post conditions | | |
| Flow of events | Actor | System |
| | 1 Run the Bingo application | 1.1 show nearby locaitons |
| | | |
| Exception conditions | | |

| | |
|--------------------------------|-----------------|

| Software Architecture Document | Date: 25/Jul/14 |
| SAD submission | |

5. Logical View

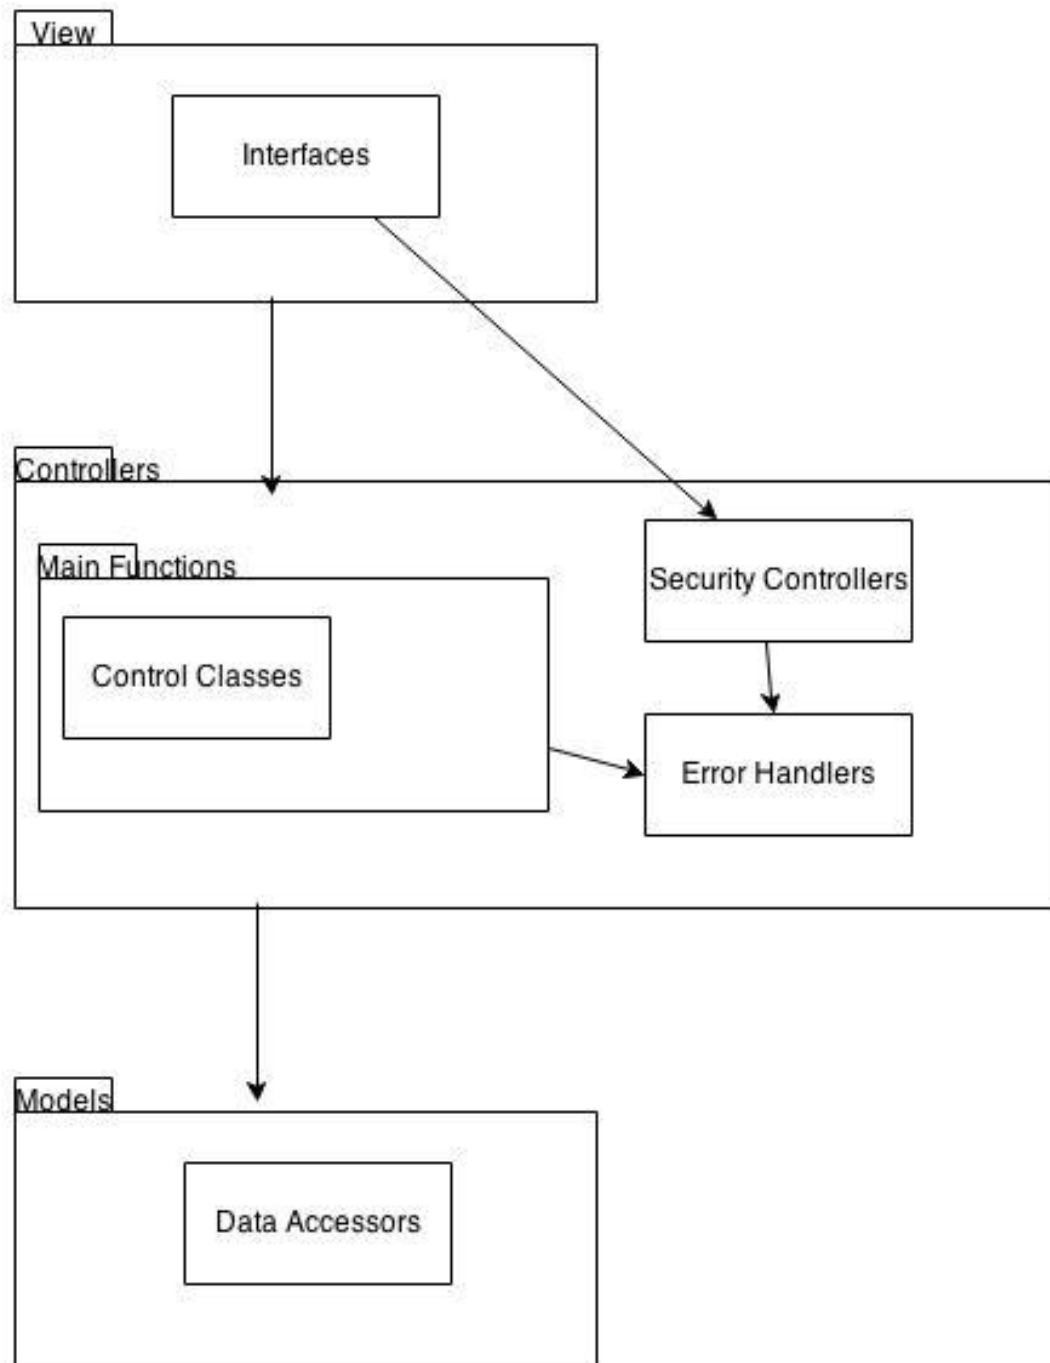

| | |
|--------------------------------|-----------------|
| Bingo | Version: 1.0 |
| Software Architecture Document | Date: 25/Jul/14 |
| SAD submission | |

5.1 Overview

The system is decided to implement using MVC architecture. The package diagram for the applicatoin is shown below

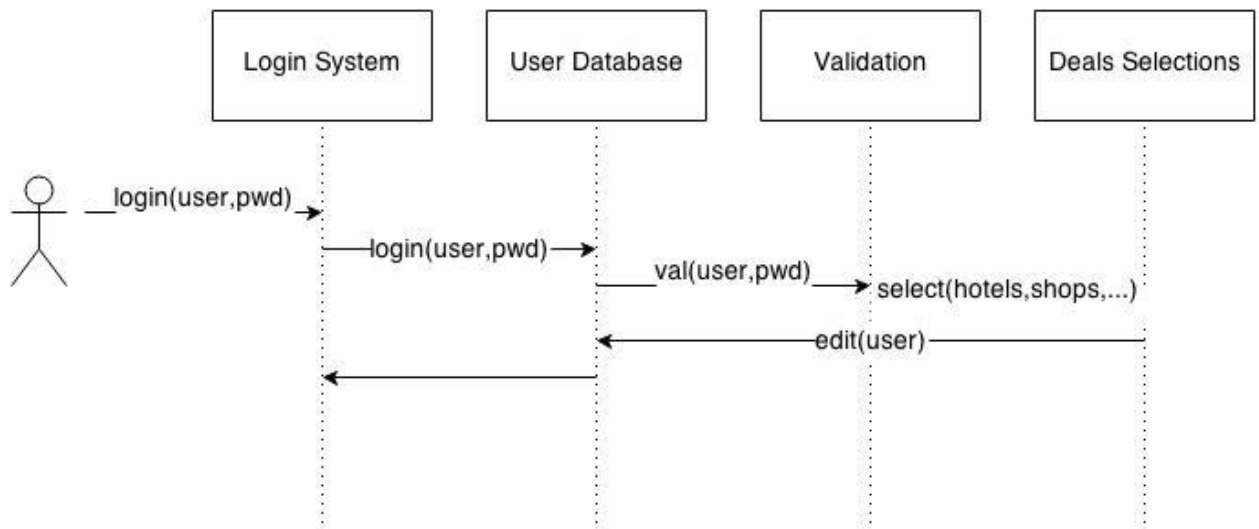

5.2 Architecturally Significant Design Packages

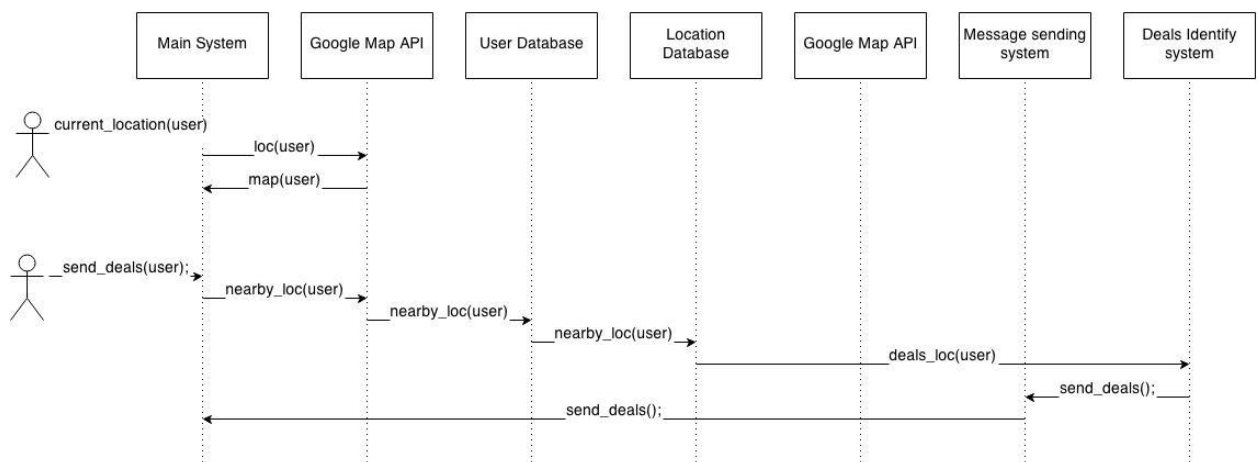

| | |
|--------------------------------|-----------------|
| Bingo | Version: 1.0 |
| Software Architecture Document | Date: 25/Jul/14 |
| SAD submission | |

6. Process View

Process of Login System

Process of Bingo Application

| | |
|--------------------------------|-----------------|
| Bingo | Version: 1.0 |
| Software Architecture Document | Date: 25/Jul/14 |
| SAD submission | |

7. Deployment View

Deployment View of the Bingo Application

| | |
|--------------------------------|-----------------|
| Bingo | Version: 1.0 |
| Software Architecture Document | Date: 25/Jul/14 |
| SAD submission | |

8. Implementation View

4+1 architecture

8.1 Overview

Define the various layers and their contents, the rules that govern the inclusion to a given layer, and the boundaries between layers. Include a component diagram that shows the relations between layers.

8.2 Layers

Each layer has specific responsibilities.

- The **presentation layer** deals with the presentation view of the app.
- The **control layer** manages the access to the domain layer
- The **resource layer** (integration layer) is responsible for the access to the enterprise information.
- The **domain layer** is related to the business logic and manages the accesses to the resource layer.
- The **Common Elements layer** gathers the common objects reused through all the layers

9. Size and Performance

Performance

- Response time in website
Response time in website should be less than 1 second. User should be able to register, login and select types from site as quickly as possible

| | |
|--------------------------------|-----------------|
| Bingo | Version: 1.0 |
| Software Architecture Document | Date: 25/Jul/14 |
| SAD submission | |

- Response time in Bingo application
Response time in Bingo application should be less than 5 seconds. Deals should be sent to the application within 5 seconds
- Concurrent Access
At least 100 users can be able to concurrently access to the website

10. Quality

Several quality aspects were considered

- Extensibility
- Reliability
- Portability
- Security
